

DA/DAW...type Pilot Operated Unloading Relief Valve

DA/DAW...5XJ...type

Sizes 10, 25, 32
Max. Working Pressure: 315 bar
Max. Flow: 240 L/min

Contents

Function and configuration	02
Symbols	03
Sample circuit	03
Specification	04
Technical data	05
Characteristic curves	06
Unit dimensions	07-09
Sub-plate	10

Features

- Sub-plate mounting
- Porting pattern conforms to DIN 24 340, form D, and ISO 5781
- Manifold plate mounting
- 4 pressure ratings
- 4 adjustment elements:
 - Rotary knob
 - Adjustable bolt with protective cap
 - Lockable rotary knob with scale
 - Rotary knob with scale
- Solenoid unloading valve

Function and configuration

DA/DAW type valve is a pilot operated pressure shut-off valves. It is used to charge fluid to accumulator in system, or to unload the low pressure pump in high/low pressure pump system.

Pressure shut-off valves basically consist of the main valve (1) with the spool assembly (3), pilot valve (2) with pressure adjustment element and check valve (4). In valves size 10, the check valve (4.1) is built into the main valve (1). In valve sizes 25 and 32, the check valve (4.2) is built into a separate plate installed under the main valve (1).

Pressure shut-off valve type DA

• Diverting pump flow from P to A to P to T.

The pump delivers flow via check valve (4) into the hydraulic system (P to A). Pressure in port A acts on the pilot control spool (6) via pilot line (5). At the same time, pressure in port P passes to the spring loaded side of the main spool (3) and ball (9) in the pilot valve (2) via orifices (7) and (8). As soon as the setting pressure in the hydraulic system is reached, the ball (9) lifts off against spring (10). Pressure fluid now flows via orifices (7) and (8) into spring chamber (11). The fluid returns to tank either internally via control line (12) in valve type DA..5XJ/... or externally via control line (13) in valve type DA..5XJ/..Y... Due to orifices (7) and (8), pressure drop is now presented at the main spool (3). The main spool (3) now lifts off its seat and opens the connection from P to T. The check valve (4) closes the connection from A to P. The ball valve (9) is kept opening by the system pressure via pilot spool (6).

• Diverting pump flow from P to T to P to A.

The area of the pilot spool (6) is 10 % or optionally 17 % greater than the effective area of the ball (9). The effective force on the pilot spool (6) is, therefore, 10 or 17 % greater than the effective force on the ball (9). When the actuator pressure falls to the cut-off pressure which corresponds to the switching pressure differential, spring (10) pushes ball (9) on to its seat. Pressure is then built up on the spring loaded side of the main spool (3). In conjunction with spring (14), the main spool (3) is closed the connection from P to T is isolated. The pump flow passes again via the check valve (4) into the hydraulic system (P to A).

Pressure shut-off valve type DAW

The function of this valve is basically the same as the DA valve. A solenoid directional valve (15) can, however switch the setting cut-off pressure of the pilot valve either from P to A or from P to T.

DA				-	-	5XJ	/	-	/						*	
Without directional valve = No code															Further details in clear text	
With directional valve=W															No code= NBR seals	
Pilot operated valve=No code															V = FKM seals	
Pilot valve without main spool assembly = C															Only DAW:	
(No mark for nominal size)															Z4=Electrical plug without lamp	
Pilot valve with main spool assembly = C															Z5L= Electrical plug with lamp	
(Marked with size 30)															Only DAW:	
Nominal size 10 =10															N= With hand override	
Nominal size 25 =20															Only DAW:	
Nominal size 32 =30															G24 = 24V DC	
For DAW:															W220-50 = 220V AC, 50Hz	
Normally closed															W120-60 = 120V AC, 60Hz	
(load when breakaway, unload when electrified) =A															W220R = 220V AC rectification	
Normally open															(Other voltage refer to type WE6)	
(unload when breakaway, load when electrified) =B															Only DAW:	
Rotary knob =1															6E= With high performance	
Adjustable bolt with protective c =2															directional spool valve	
Lockable rotary knob with scale =3															No code= Internal pilot oil drain	
Rotary knob with scale =7															Y = external pilot oil drain	
Series 50J to 59J = 5XJ															Switching pressure differential (P → A)	
(50J to 59J series :unchanged installation and connection dimensions)															10 = In the mid range 10 %	
															17 = In the mid range 17 %	
															50= Pressure adjustable up to 50bar	
															100= Pressure adjustable up to 100bar	
															200= Pressure adjustable up to 200bar	
															315= Pressure adjustable up to 315bar	

Technical data

Fluid			Mineral oil suitable for NBR and FKM seal		
			Phosphate ester for FKM seal		
Fluid temperature range		°C	-30 to +80 (NBR seal)		
			-20 to +80 (FKM seal)		
Viscosity range		mm²/s	10 to 800		
Degree of contamination			Maximum permissible degree of fluid contamination: Class 9. NAS 1638 or 20/18/15, ISO4406		
Max.operating pressure	Port A	bar	315		
Max. setting pressure		bar	50, 100, 200, 315		
Size			10	25	32
Max. flow-rate	version 10%	L/min	40	80	120
	version 17%		60	120	240
Solenoid technical data			Refer to version WE6, normally close chooses 3WE6A9, normally open choose 3WE6B9		
Installation			Optional		
Size			10	25	32
weight	DA	kg	Approx.3.8	Approx.7.9	Approx.12.3
	DAW	kg	Approx.5.3	Approx.9.4	Approx.13.8
	DAC	kg	Approx.1.2 (If version DAWC, add 1.5 kg)		
	DAC30	kg	Approx.1.5 (If version DAWC30, add 1.5 kg)		

Characteristic curves (Measured at t=40°C ±5°C , using HLP46)

- 1 Used for 10% switching pressure differential
- 2 Used for 17% switching pressure differential

These curves are valid for an outlet pressure (T) = zero over the full flow range.

Switching pressure differential based on setting value (P → A)

▨ = Deviation range for the 10% version

▨ = Deviation range for the 17% version
